

EKSA DWI ERYANTI

S.Farm · Health-Tech Enthusiast · Building at the intersection of Pharmacy & Technology
Bogor, Indonesia · eksadwieryanti@email.com · [linkedin.com/in/eksadwieryanti](https://www.linkedin.com/in/eksadwieryanti) · [+62 81387385711](tel:+6281387385711)

SUMMARY

I'm a pharmacy graduate with hands-on research experience in natural product formulation and antibacterial testing. Through my research, I developed a strong foundation in systematic problem-solving, iterative testing, and data analysis, skills I now want to apply to building technology. I'm applying to Apple Academy to learn iOS development and create health-focused applications that improve medication accessibility and patient care in Indonesia.

EDUCATION

Institut Sains dan Teknologi Nasional (ISTN), Jakarta 2021 – 2026
Bachelor of Pharmacy (S.Farm)
Thesis: *Antibacterial Activity and Gel Formulation of Kawista Fruit Peel Extract (Limonia acidissima L.) Using Ultrasonic-Assisted Extraction Against Staphylococcus epidermidis*

- Involved multi-variable data analysis, iterative formula testing, and systematic evaluation across 6 physical parameters
- Applied UAE (Ultrasonic-Assisted Extraction) — optimizing bioactive compound yield through controlled cavitation at 40 kHz
- Designed and executed a modern extraction protocol (UAE) to optimize bioactive compound yield from Kawista fruit peel
- Conducted systematic antibacterial testing and interpreted inhibition zone data across multiple extract concentrations against *Staphylococcus epidermidis*
- Developed and evaluated 3 gel formula iterations across 6 physical parameters — identified critical failure variables in natural polymer (pectin) formulation
- Performed statistical analysis (SPSS) and scientific data visualization (GraphPad) across multi-variable datasets
- Designed structured data recording systems for lab documentation and result tracking throughout all research phases

EXPERIENCE

Pharmacy Assistant 2022 – 2025
Apotek Cikampak Farma & Apotek Eci Sehat Farma, Bogor

- Prepared and verified medications with high accuracy following pharmaceutical standards
- Managed daily dispensing of 50+ prescriptions with zero documentation errors
- Managed inventory documentation and stock control to maintain data accuracy and product availability
- Supported pharmacy operations through administrative recordkeeping and storage management
- Coordinated with licensed pharmacists to ensure service quality and product handling met regulatory standards

Treasurer — Yearbook Committee 2021 – 2022
SMA IT Bina Bangsa Sejahtera, Bogor

- Managed an operational budget of IDR 70 million with full accountability and transparency
- Prepared financial reports and ensured all expenditures aligned with the approved budget plan

Public Relations — Pharmacy Student Association Election Committee (HIMMAFAR) May 2024
Institut Sains dan Teknologi Nasional

- Served as a communication bridge between students, faculty, and alumni throughout the election process
- Managed cross-stakeholder coordination and ensured consistent information flow across all parties

Participant Coordinator — Pharmacy Orientation Program 2023 October 2024
Institut Sains dan Teknologi Nasional

- Responsible for the safety and wellbeing of all participants across a 3-day event (Oct 25–27, 2024)
- Facilitated critical thinking and constructive discussion among new students grounded in ethics and solidarity
- Acted as the primary liaison between participants and the core committee during emergencies and health situations

PROJECT CONCEPT

Health App Concept — Family-Centered Medication Companion App 2027
Concept Project

Identified a critical gap in medication adherence among elderly patients in Indonesia, where non-adherence is commonly driven by complex regimens and lack of caregiver support. Conceptualized an iOS app featuring:

- Family Loop System — caregivers receive real-time notifications when a dose is missed
- Voice-first & large-UI design built specifically for elderly users
- Photo-scan medication input — photograph a drug label to auto-populate schedule and dosage
- Simple drug interaction alerts as a safety net (not diagnosis)
- Refill reminder with nearest pharmacy locator

Problem identified from pharmaceutical background and direct observation of caregiver challenges in Indonesian households. Applying to Apple Academy to build this solution.

Currently learning Swift fundamentals as a first step toward building this solution.

SKILLS & TOOLS

Analytical	Multi-variable data analysis · Systematic experimental design · Iterative problem-solving · Lab documentation & reporting
Scientific	Ultrasonic-Assisted Extraction (UAE) · TLC · Disc diffusion testing · Gel evaluation (pH, viscosity, spreadability, adhesiveness) · Phytochemical screening
Digital Tools	Microsoft Excel (advanced) · SPSS · GraphPad · Canva
Currently Learning	Swift Playgrounds · iOS development fundamentals
Languages	Indonesian (native) · English (professional)
